

Geography homework by Ruben Mazziotta

Ten reasons why Milton Keynes is a sustainable city

1. MK has many roundabouts which reduce the amount of traffic. Traffic jams generate tons of CO₂ due to motor vehicles still being active
2. MK has a massive recycling centre which has been going on for quite some time
3. There are these robots that travel to a locating in MK to delivery a parcel. These are electric powered robots thus less fossil fuels will be burnt
4. There is around 270km of red ways. Red ways are road in which cyclers can travel on instead of roads which are quite dangerous
5. There are many local farms which means less food will be transported from other countries or parts of the country which means less CO₂.
6. Milton Keynes centre has shops and jobs close by so less travelling with vehicles needs to be done
7. So many parks and trees live in MK. Trees absorb CO₂ as a natural process to make food which is known as photosynthesis
8. Buses roam the streets of Milton Keynes which in a way is good because buses can transport more people than cars
9. Flats are commonly found in MK which reduces the amount of resources and land that has to be used to build more houses
10. Wind turbines can be seen in many places of MK which helps abolish the use of fossil fuels
11. Concrete cows produce less methane than real cows :)
